- (1) **Aniline** finished leather range that has a natural appearance and feel but is less resistant to soiling and marking.
 (2) **Antique** leather range with a pigmented bottom coat and a thinner antique lacquer top coat which is designed to wear off over a period of time/use revealing the lower coat beneath, to replicate the original antique style.
 (3) **Marine Interiors** cover a wide variety of environments, from restaurants on Cruise Liners to Helm seats for speed boats. If you are unsure of the correct leather for an application, please contact us for advice.

Information on leather terms

- **Pigmented finish** – A finish in which a sprayed polymer coating containing pigments is applied to the leather surface. This is the most durable leather type with more resistance to scuffing, fading and soiling.
- **Semi-aniline finish** – A light finish coating with a very small amount of pigment is applied to ensure a more uniform consistent colour and add some stain resistance. The natural characteristics are still visible.
- **Aniline finish** – A surface coating that is clear or contains a dye is applied to the hide surface. This has the most natural look and feel with characteristics of the hide remaining visible, although it is more susceptible to marks and stains.
- **Full Grain** – The original surface has not been sanded or buffed but left fully intact. This leather type is selected from the best quality material.
- **Half Grain** – The surface has been buffed/sanded, then a finish applied, it has not been embossed with an artificial grain pattern.
- **Corrected Grain** – The surface grain has been partially removed to eliminate the majority of imperfections by buffing/sanding, and an embossed artificial grain pattern is applied onto the leather surface.
- **Pull-up** – Leather with a coating of wax/oil which lightens in colour with use or when tension is applied during upholstery to give a lighter/darker aged effect, it will form a patina over time.
- **Nubuck** – Aniline dyed leather which has been slightly abraded on the surface to create a fine nap.
- **Two Tone** – A type of finish with two different contrasting coats to add depth, the top-coat sometimes has a pattern effect added to give more character.
- **Sanding/Buffing** – removes some imperfections from the surface of a hide to make it more uniform.
- **Embossed** – A process of imprinting an artificial grain pattern onto the leather surface by a roller or plate.
- **Rubbed Off** – A process in which the lacquer topcoat of an antique leather is removed in certain areas using a “rub-off” solution to reveal the contrasting pigmented basecoat below. This is carried out after the furniture is upholstered, a lacquer seal-coat can then be applied.
- **Hide Characteristics** – Leather on occasion contains growth marks, scratches, insect marks and colour variation across the natural hide, these should not be considered as a fault but distinguish it from cheaper man-made alternatives and give unique character to a finished piece.
- **Distressed Leather** – A leather that has a finish which is applied / designed to look naturally aged.
- **Hide Selection** – Hide grade selection is carried out at various points of the production process and is dependent upon the range that it is to be manufactured into, with the best grade hides used for our full grain premium ranges. Selection is linked to the finish type and whether the surface is to be embossed with an artificial grain or left as a half grain or full grain. Hides containing more imperfections including occasional holes are generally more prominent in corrected grain and pigmented ranges. This selection process is used to keep the selling cost of each range competitive for the end user whilst still achieving good cutting yield.

All our leathers comply with strict regulations and EU directives covering the use and presence of PCP, CFC, ChromoVI, Dimethylfumarate (DMF) and Azo dyestuffs during the tanning process.

Leather is a natural product and colour and texture variations between batches may occur.

PLEASE REFER TO OUR SPECIFICATION SHEET FOR EACH RANGE (Available Online).
